

Gurinder Singh

Sr. Staff Applied AI Engineer (Mobile & AI)

LLM agents | RAG pipelines | MCP infrastructure | iOS platform architecture | Agentic workflows

Portfolio: guriboycodes.dev LinkedIn: linkedin.com/in/gurinder-singh-a30a1a48/ Email: gsingh622@yahoo.com

SUMMARY

Sr. Staff Applied AI and iOS platform engineer with 10+ years building production consumer systems, agentic AI infrastructure, and mobile experiences at PayPal/Venmo scale. Patent holder and technical leader who turns ambiguous AI opportunities into secure, observable, product-ready systems.

KEY ACHIEVEMENTS

- Agent0 deployed to Venmo & PayPal engineering teams - self-correcting agentic workflows.
- Built MAIA - agentic merchant onboarding AI that takes merchants from 0 to live in < 20 minutes.
- Built Vireo - production LLM observability platform with MCP server integration and memory management.
- Built Darwin - evolutionary AI skill engine with Bloom/Fossil selection for self-improving agent capabilities.
- Built Mac-in-a-Mac - nested macOS virtualization that runs iOS test suites 3x faster.
- Built claude-cosmos - unified LLM gateway proxy with PII scrubbing and multi-model routing.
- Scaled Venmo iOS features for 92M+ active users; closed \$60M enterprise contract in year one.
- Led Project Mercury - AI-powered agentic e-commerce platform with patent applications filed.
- Launched Venmo Gift Cards, Pay With Venmo for JetBlue, and QRC Widget as patent holder.
- Conducted 500+ technical interviews; mentored engineers and built cross-team AI enablement forums.

TECHNICAL SKILLS

AI / Agents	Agent0, MAIA, Vireo, Darwin, claude-cosmos, RAG, MCP servers, LangChain, LangGraph, OpenTelemetry
Mobile / Apple	Swift, SwiftUI, UIKit, CoreML, ARKit, ActivityKit, WidgetKit, XCTest, Fastlane, macOS virtualization
Cloud / Data	Python, FastAPI, Docker, AWS, GCP, Azure, PostgreSQL, Neo4j, Qdrant, ChromaDB, Redis
Delivery	CI/CD, GitHub Actions, observability, technical interviews, mentoring, cross-team AI enablement

PROFESSIONAL EXPERIENCE

PayPal / Venmo - Sr. Staff Applied AI Engineer

2019 - Present | Tampa, FL / Remote

- Agent0 deployed to Venmo & PayPal engineering teams - self-correcting agentic workflows.
- Built MAIA - agentic merchant onboarding AI that takes merchants from 0 to live in < 20 minutes.
- Built Vireo - production LLM observability platform with MCP server integration and memory management.
- Built Darwin - evolutionary AI skill engine with Bloom/Fossil selection for self-improving agent capabilities.
- Built Mac-in-a-Mac - nested macOS virtualization that runs iOS test suites 3x faster.
- Built claude-cosmos - unified LLM gateway proxy with PII scrubbing and multi-model routing.
- Scaled Venmo iOS features for 92M+ active users; closed \$60M enterprise contract in year one.
- Led Project Mercury - AI-powered agentic e-commerce platform with patent applications filed.
- Launched Venmo Gift Cards, Pay With Venmo for JetBlue, and QRC Widget as patent holder.
- Partnered across engineering, product, and design to move AI prototypes into canonical platform programs.

Google Stadia - iOS Developer / Consultant

2018 - 2019 | Mountain View, CA

- Supported launch readiness for Stadia cloud gaming on mobile platforms with Flutter/Dart and native iOS plugins.
- Implemented Core Bluetooth controller connectivity and low-latency mobile integration paths.
- Used Xcode Instruments to profile CPU/GPU performance and improve launch-quality stability.

Morgan Stanley - iOS Engineer

2016 - 2018 | Greater New York City

- Modernized Wealth Management mobile experiences for ultra-high-net-worth clients.
- Migrated core iOS code from Objective-C toward Swift while maintaining hybrid Cordova infrastructure.
- Built check-deposit, biometric authentication, certificate pinning, jailbreak detection, and push authentication features.

SELECTED PRODUCT LAUNCHES AND PATENTS

- QRC Widget patent holder - first Venmo SwiftUI widget path for automatic QR code generation.
- Venmo Gift Cards - iOS architecture and delivery for merchant-backed stored-value experiences.
- Pay With Venmo for JetBlue - partner checkout launch and mobile payment integration.
- Project Mercury - agentic e-commerce platform with patent applications filed.
- Mac-in-a-Mac - first nested macOS virtualization substrate for faster iOS CI loops.

LEADERSHIP AND COMMUNITY

- Conducted 500+ technical interviews across iOS, mobile, and platform engineering roles.
- Mentored engineers on AI-assisted development, mobile architecture, CI reliability, and technical storytelling.
- Built cross-team AI enablement forums, demos, and documentation that helped teams adopt agentic workflows responsibly.
- Volunteer and education work includes NYC high school and nonprofit technical mentorship.
